

Create an rds connection with ec2 instance and use it to create an sql database and a sample table.

The top screenshot displays the AWS Management Console 'Instances' page. A table lists EC2 instances, with the following data:

Name	Instance ID	Instance state	Instance type	Status check	Alarm status	Availability Zone	Public IPv4 DNS	Public IPv4 ...	Elastic IP
reactjs	i-05eeae1ab4293b046	Stopped	t2.micro	2/2 checks passed	No alarms	ap-south-1a	-	52.66.27.121	-

The bottom screenshot shows the 'Launch instance' wizard. The 'Name and tags' section has 'RDS' as the name. The 'Application and OS Images' section shows 'Amazon Linux 2023 AMI' selected. The 'Instance type' section shows 't2.micro' selected. The 'Summary' section shows the configuration details.

RDS > Create database

Create database

Choose a database creation method info

☐ Standard create You use all of the configuration options, including ones for availability, security, backups, and maintenance.

☒ Easy create Use recommended best-practice configurations. Some configuration options can be changed after the database is created.

Configuration

Engine type info

☐ Aurora (MySQL Compatible)

☐ Aurora (PostgreSQL Compatible)

☐ MySQL

☒ MariaDB

☐ PostgreSQL

☐ Oracle

☐ Microsoft SQL Server

MariaDB Community Edition is a MySQL-compatible database with strong support from the open source community, and extra features and performance optimizations.

- Supports database size up to 64 TiB.
- Supports General Purpose, Memory Optimized, and Burstable Performance instance classes.
- Supports automated backup and point-in-time recovery.
- Supports up to 15 Read Replicas per instance, within a single Region or 5 read replicas cross-region.
- Supports global transaction ID (GTID) and thread pooling.
- Developed and supported by the MariaDB open source community.

DB instance identifier

Type a name for your DB instance. The name must be unique across all DB instances owned by your AWS account in the current AWS Region.

database-1

The DB instance identifier is case-insensitive, but is stored as all lowercase (as in "mydbinstance"). Constraints: 1 to 63 alphanumeric characters or hyphens. First character must be a letter. Can't contain two consecutive hyphens. Can't end with a hyphen.

Master username info

Type a login ID for the master user of your DB instance.

admin

1 to 16 alphanumeric characters. First character must be a letter.

☐ Auto generate a password

Amazon RDS can generate a password for you, or you can specify your own password.

Master password info

Constraints: At least 8 printable ASCII characters. Can't contain any of the following: / (slash), ' (single quote), " (double quote) and @ (at sign).

Confirm master password info

▼ View default settings for Easy create
